## Software Files

Programs and support files are contained in a self-extracting file [Dolby.exe](#). Click on the file name to begin extracting files. When prompted, enter a hard drive location for the Dolby files. All programs are DOS based and *must* be run in DOS mode with Windows shut down. Failure to do so may cause the program to run incorrectly.

Application software included:

- DRAS10 - Dolby Digital Reader Alignment Software. Used with an oscilloscope to confirm reader alignment.
- Load500 - CP500 Upgrade Software. Used with .sct file to upgrade CP500 operating system to current version.
